

## SUMMARY

Passionate data analytics and analytics engineering professional with previous experience as a recruiter. Experienced in start-ups and tech giants, adaptable and resilient. Determined to grow exponentially.

## EDUCATION

**Master of Information Technology | Distinction**  
University of Wollongong

Feb 2022 – Dec 2023  
Wollongong, NSW

## EXPERIENCE

**Humii Inc.**

Data Engineer (Jr.)

Mar 2023 – Present  
Wollongong, NSW

- About Humii: Customer experience tracking for high-performing retailers via a single AI-powered dashboard.
- Made valuable contributions to a dynamic crawler project using **Scrapy framework**, refining data extraction and processing techniques that significantly improved data collection and analytical processes.
- Single-handedly creating a Customer Relationship Management (CRM) entirely from scratch using **retool**, demonstrating technical expertise by optimizing data flows, implementing business logic and multi-step process flows, then integrating APIs to rapidly deliver a robust, user-friendly solution within technical constraints.
- Gained proficiency in data modeling and transformation, utilizing **dbt** to design streamlined and insightful data analysis and reporting solutions.
- Empowered data pipelines through the implementation of **dagster**, ensuring seamless and reliable information flow across the organization.
- Thrived in Agile environment with sprint planning, GitHub merge requests, and supporting staging and production deployments.

**University of Wollongong**  
Academic Tutor

Feb 2024 – Present  
Wollongong, NSW

- Conducted computer lab sessions on database management and development.
- Demonstrated practical lab tasks focusing on SQL, conceptual schema modeling, and logical design.
- Addressed student questions and provided guidance on query optimization, schema design, and best practices.

## PROJECTS

**Twitter Account Classification | Github**

*Technologies: Python (pandas, scikit-learn, NumPy)*

- Executed comprehensive data pre-processing on Twitter datasets, including stratified splitting to preserve account type distribution, and developed the **cleanTweet** function to improve text quality for model input.
- Employed a bag of words model with logistic regression for account classification, fine-tuned parameters for optimal performance, and analyzed keywords to distinguish between human and non-human accounts.

**Precision-Tolerant Database System (Capstone project) | Github**

*Technology: SQL*

- This is my capstone project to formulate a precision-tolerant theoretical database framework, incorporating a case study on a ride-hailing service to address 'imprecise' data within Numerical Conditional Constraints (NCC), thereby enhancing the reliability of the database and the precision of data analysis.

**Ecommerce Data Insights | Github**

*Technologies: dbt, Apache Airflow, Snowflake, SQL*

- An e-commerce analytics project built with dbt, Airflow, and Snowflake aims to establish a robust data pipeline using the sample **tpch** dataset, focusing on products, customers, and purchase data. The project seeks to enhance data-driven decision-making by providing insights into customer behavior and sales trends.

## SKILLS

**Programming Languages**

Python, SQL, JavaScript, HTML/CSS

**Frameworks and Libraries**

PostgreSQL, Flask, dbt, Dagster, Scrapy, Hive, Spark, Apache Airflow, Snowflake

**Softwares & Development Tools**

Tableau, GitHub, JIRA, VS Code, PyCharm, Jupyter Notebook
